DRIED EGG MEMORANDUM NO. 6

To: Samplers of Dried Eggs

From: Roy C. Potts, Chief, Inspection and Grading Division, Dairy
and Poultry Branch

Subject: Purchase of Dried Eggs by the Federal Surplus Commodities
Corporation under Announcement FSC-1000

Attached hereto are copies of Announcement FSC-1000, Memorandum to Manufacturers of Dried Eggs, Schedule FSC-11, Container Specifications forms PbP-1000A and PbP-1000B and form PbP-1000 which must be used by firm making offers of dried eggs for sale to the Federal Surplus Commodities Corporation. This announcement supersedes Announcement FSC-553.

Offering days start October 21, 1942 and will continue each Wednesday thereafter until further notice, but not beyond December 23, 1942. Offers must be submitted on form PbP-1000 with an original and four signed copies. Separate offers must be submitted for each separate plant.

Each sampler should carefully study the provisions of Schedule FSC-11, Purchase Specifications for Spray Dried Whole Eggs, and be fully familiar with all the requirements contained therein pertaining to the manufacturing, inspection and grading, packaging, marking, delivery, quantity, delays and damages pertaining thereto, of dried eggs for delivery to the F.S.C.C. These specifications are complete and each sampler must know the details of the various requirements.

In view of the liquidated clause which will apply to all deliveries that are not made on time unless such delay is due to the inability of the vendor to obtain sampling and grading services, it is essential that each sampler keep an accurate record of the date on which sampling service are requested. It is also essential that the sampling and test weight report show the actual date of manufacture of each separate lot sampled. The month and day of manufacture should be stated on the report.

In addition to Schedule FSC-11, each sampler should also be thoroughly familiar with the specifications for the containers, especially the barrels and liners used for packaging dried eggs. Where the product is packed in some container other than a barrel, the sampler should be thoroughly familiar with the specifications of the type container used. These Container Specifications are complete and the sampler must be thoroughly familiar with the requirements for the particular type of container used by the vendor at the plant where he does sampling.

If at any time there are any questions relative to the proper procedure to be followed in performing the sampling, test-weighting, or grading of dried eggs accepted under this announcement, please contact this office immediately.
